

How to make environment safe to protect reproductive health

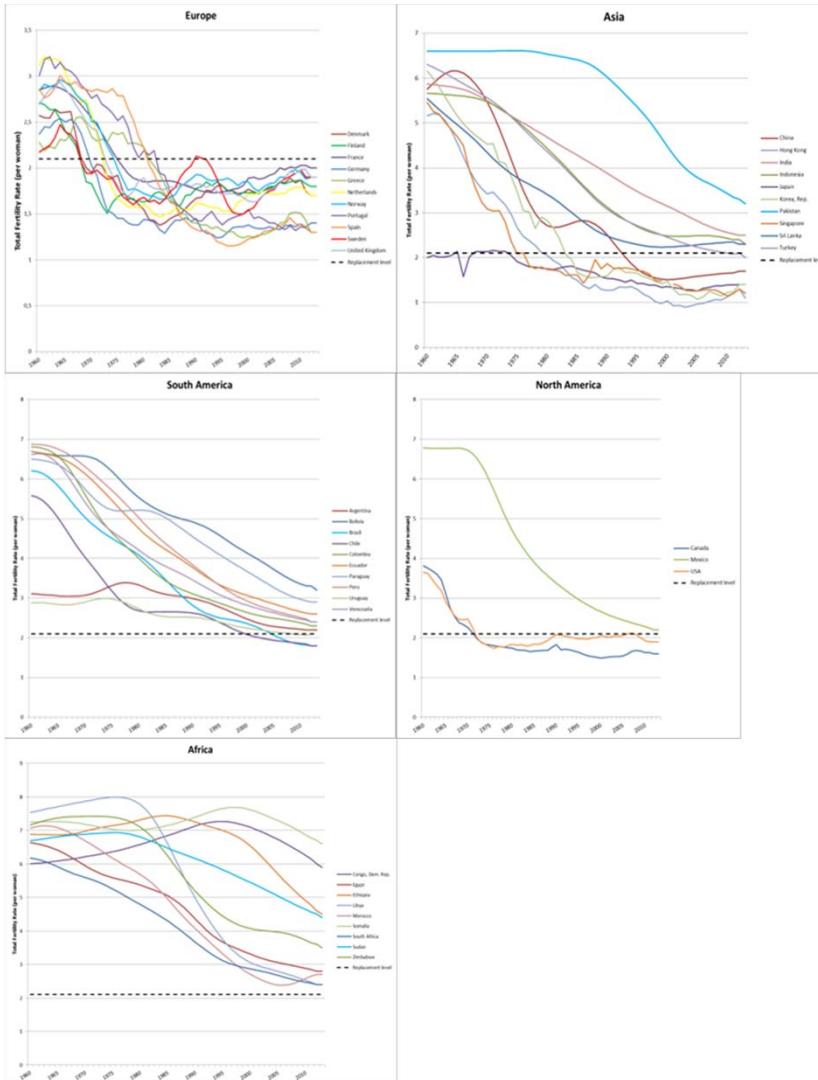

Jorma Toppari

Brussels 2018

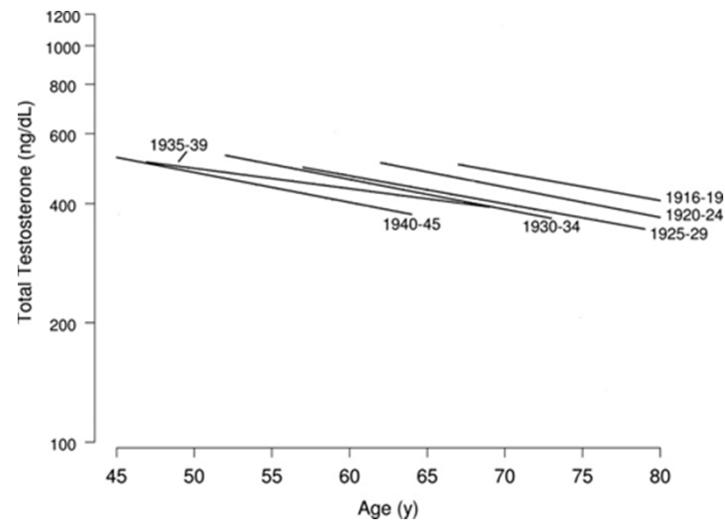

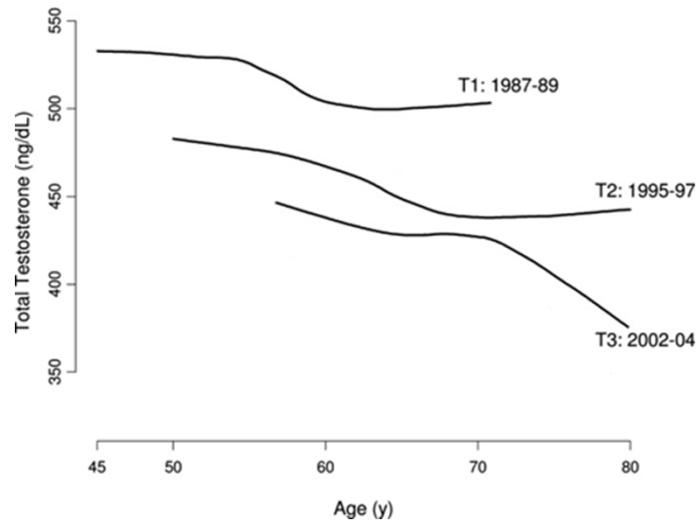

Disclosures

- I have received lecture honoraria from Merck Serono and Novo Nordisk Pharma, during the last 5 years
- Supported by
 - EU, Envir. Reprod. Health, Exposed, Eden, DEER
 - Academy of Finland
 - Pediatric Research Foundation
 - Sigrid Juselius Foundation
 - Turku University Hospital and TYKS Foundation
 - Danish Council for Strategic Research
 - Novo Nordisk Foundation
 - NIH
 - JDRF
 - EFSD
 - Danish Innovation Fund

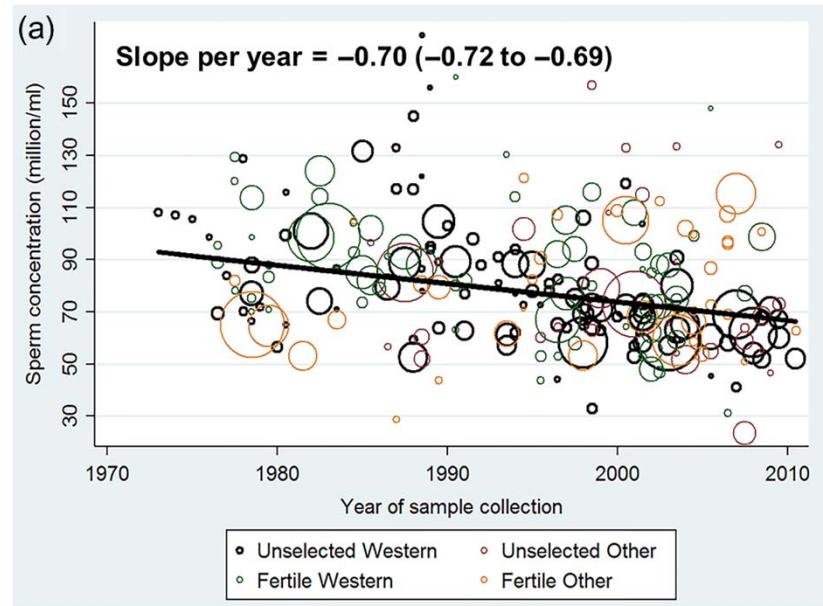

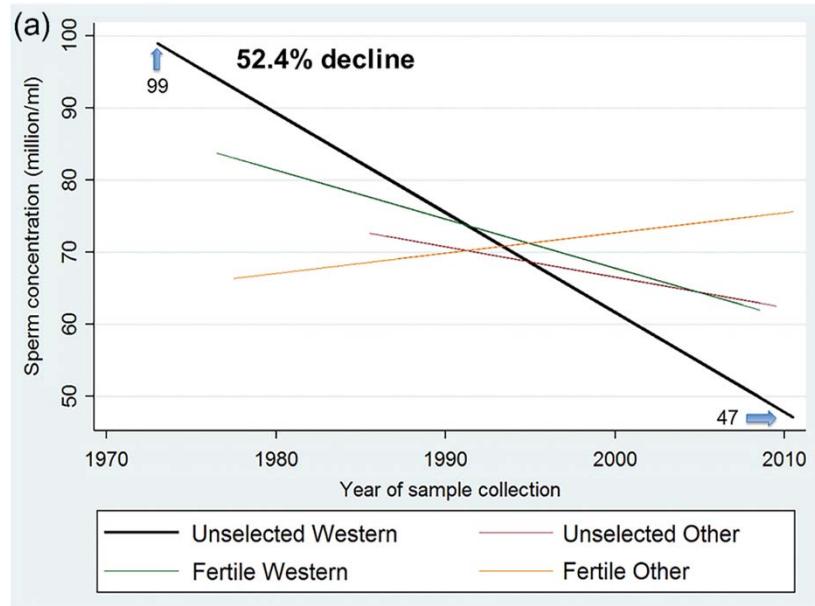

Fertility rates decline globally

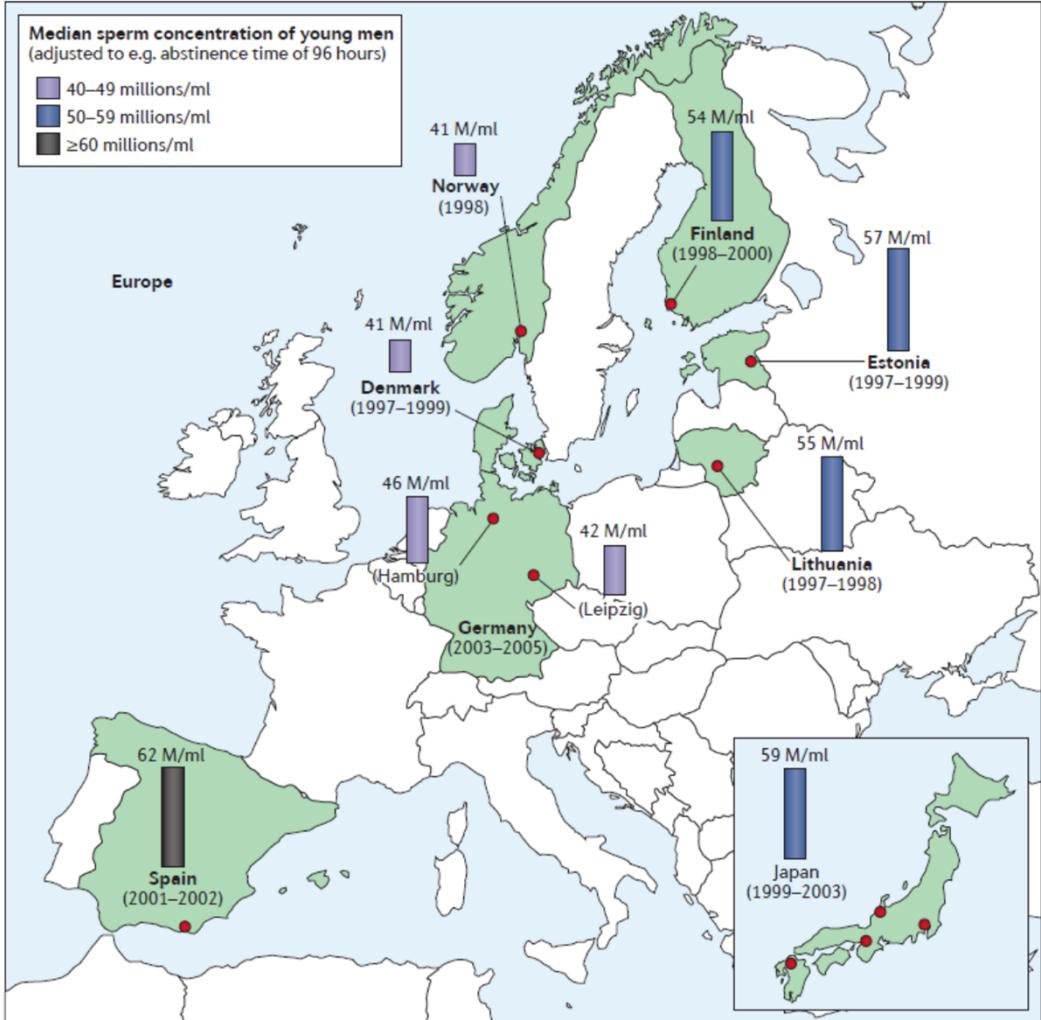

Testosterone levels have declined

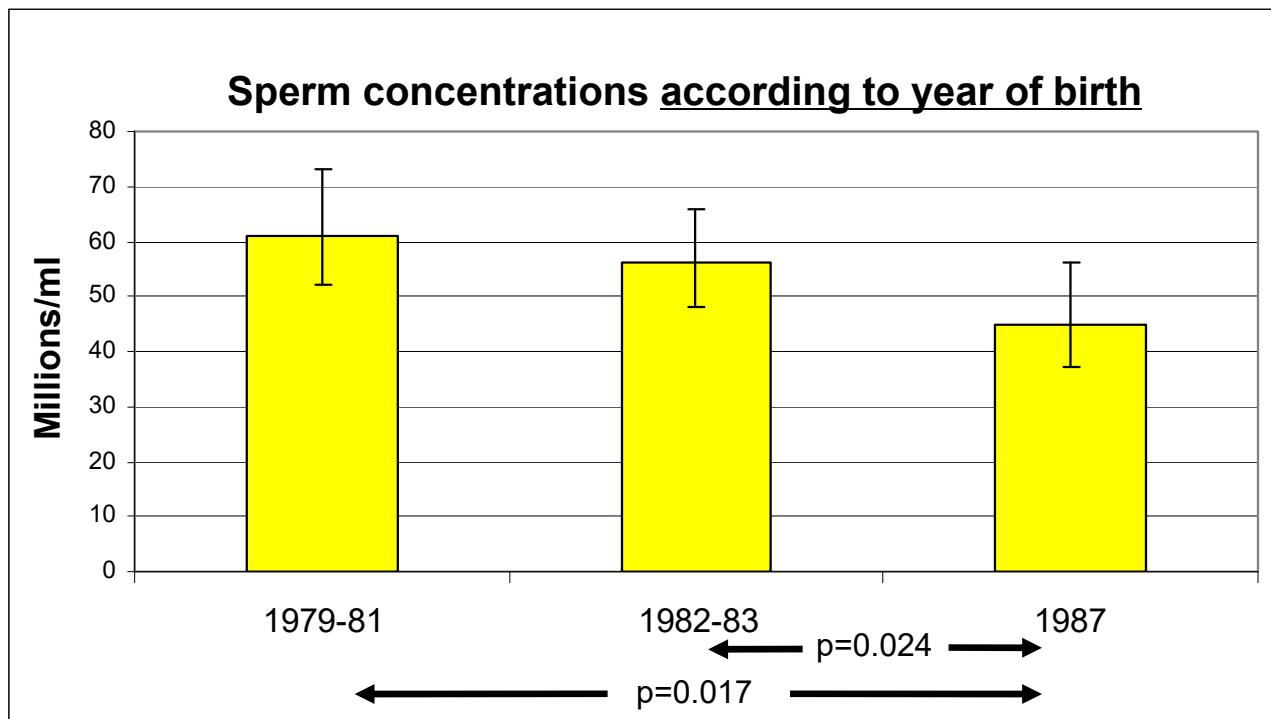

Sperm counts have declined

2562 boys

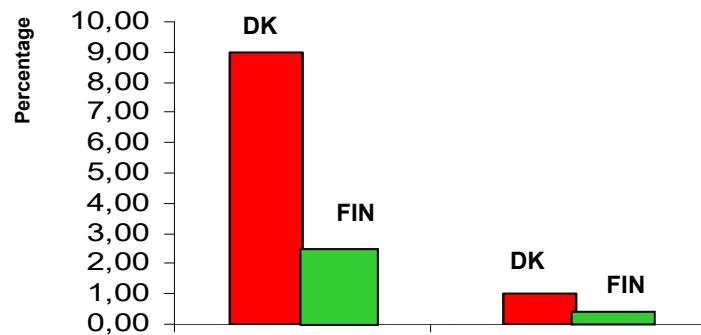

Danish-Finnish Birth Cohort Study

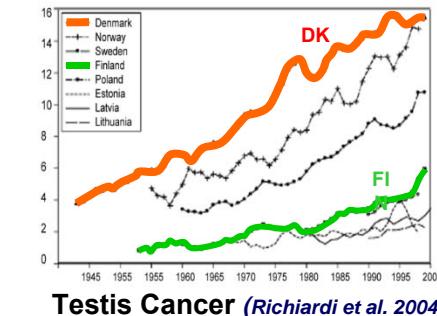

- All newborn boys of volunteer mothers (born 1997 -1999)
 - Questionnaire during pregnancy
 - Clinical examinations
 - All boys: At birth and at 3 months of age
 - Cases and controls: Also at 18 months of age
 - Biological samples
 - Blood sample at 10 - 15 gestational weeks
 - Placenta
 - Breast milk (4-8 weeks after birth)
 - Blood sample at 3 months of age

Exposure to anti-androgens

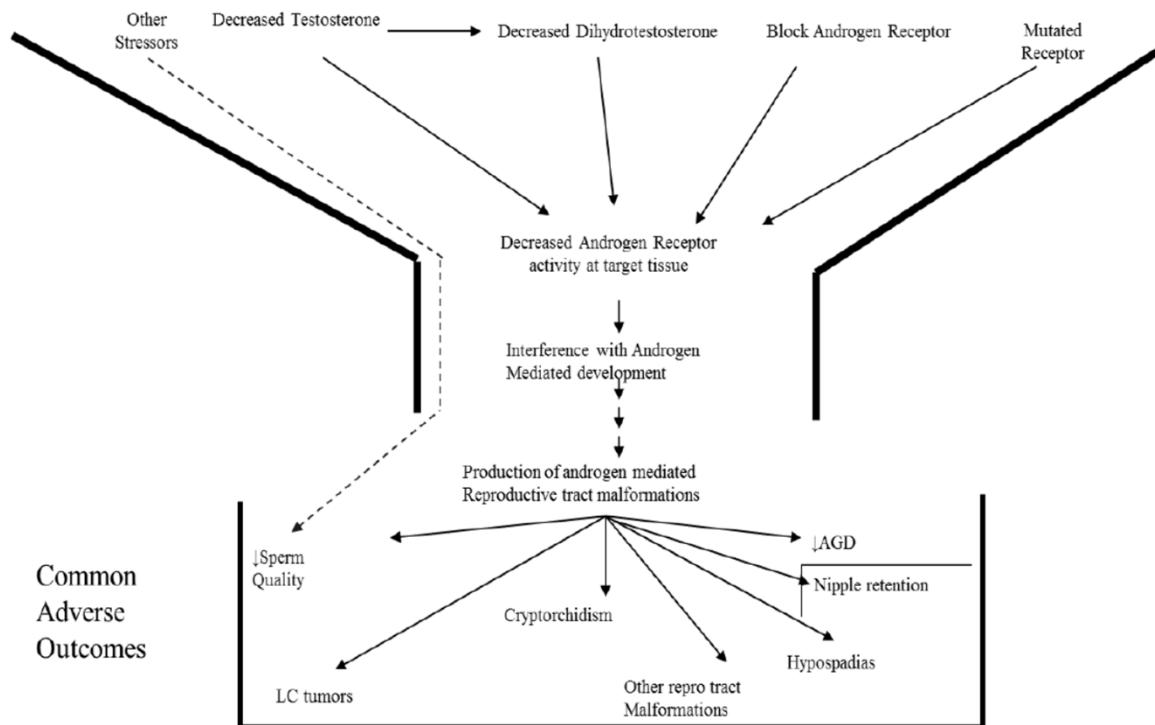

- Hypospadias
- Cryptorchidism
- Nipple retention
- Shortened anogenital distance
- Dysgenetic testicular structure
- Impaired spermatogenesis

Anti-androgens

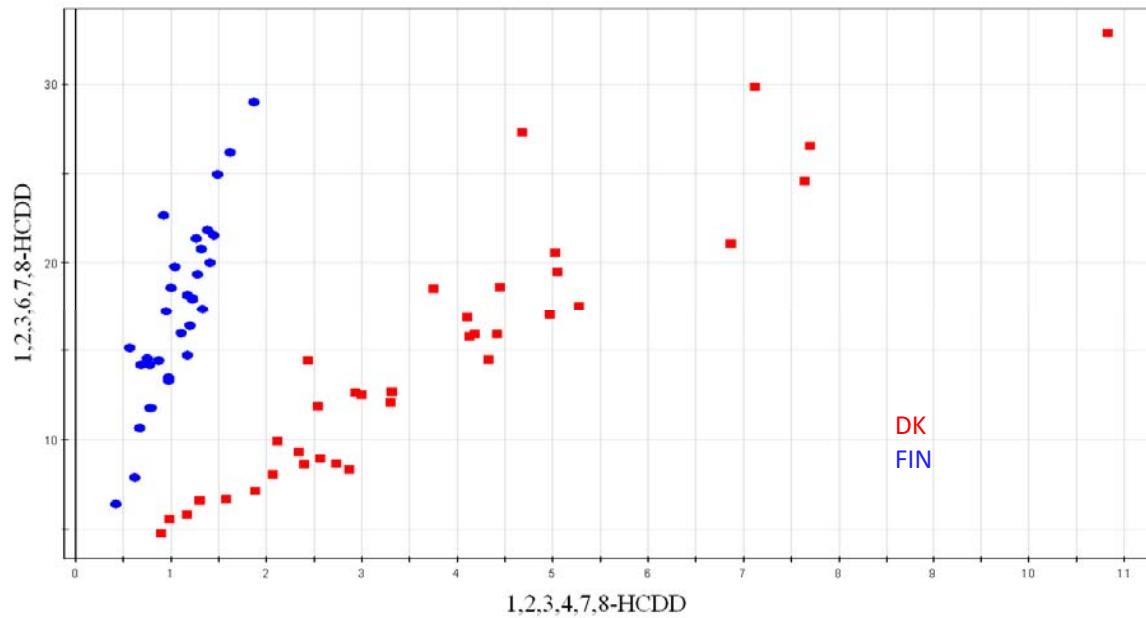

- Effects are additive
- Compounds at levels way below their NOAEL show effects
- E.g., vinclozolin, procimydone, prochloraz, p,p'DDE, and DBP together can cause hypospadias in 100 % of pups when 0% of pups show hypospadias after single chemical exposure

Phthalates and Cumulative Risk, NRC 2008

Fetal Androgen Insufficiency

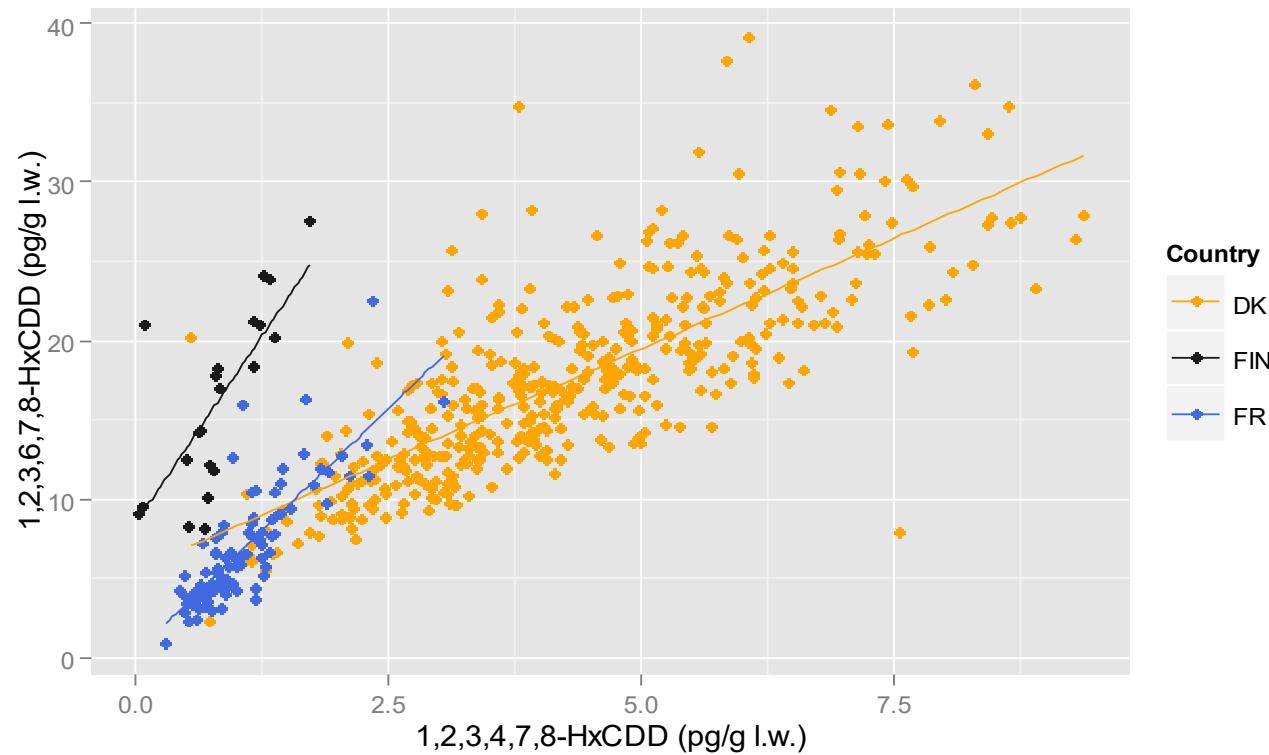

Distinct Chemical Signatures of Danish and Finnish Breast Milk: dioxins

Krysiak-Balbyn et al., Int. J. Androl. 2010

Validation of national chemical fingerprints of pollution

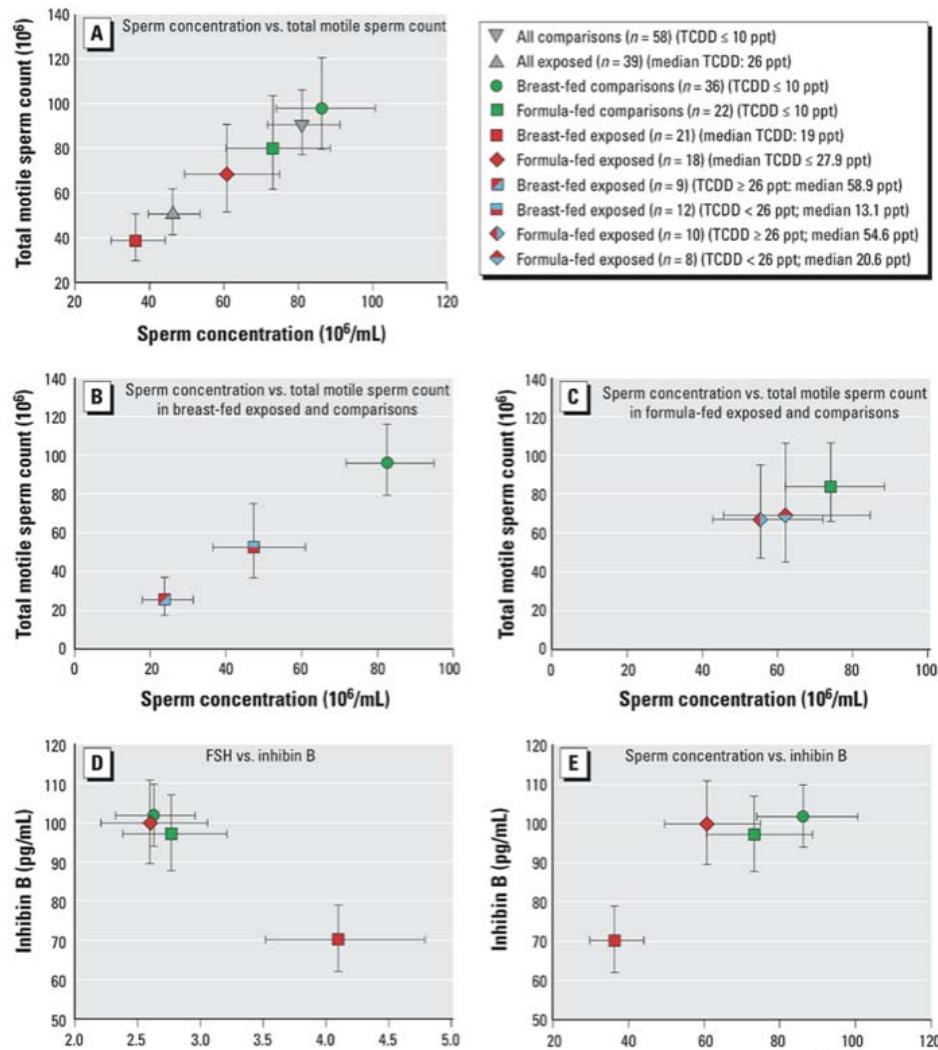

J.P. Antignac et al, **Country-specific chemical signatures of persistent organic pollutants (POPs) in breast milk of French, Danish and Finnish women** Environmental Pollution, Volume 218, 2016, 728–738

What to do?

- Get rid of persistent organic pollutants – Stockholm convention
- Identify anti-androgenic chemicals and regulate
 - QSAR
 - *in vitro*
 - *in vivo* (vinclozolin would not be identified without *in vivo* experiments)
 - Consider always mixture effects
- Protect development – young men and women, children
- Do not wait proof of human effects
- Avoid unknown risk if possible (would you drink unknown liquid from an unlabeled bottle?)
